Abaqus Explicit Analysis

In this paper, the numerical calculation model of offshore wind power single pile foundation in heterogeneous soil is established by finite element analysis software ABAQUS. In the model, the wave, ocean current and wind load on the pile foundation are equivalent to two-way symmetrical cyclic load. Based on the model, the lateral soil resistance of offshore wind power large diameter steel pipe pile in heterogeneous soil under horizontal cyclic load is studied.

Analysis of influencing factors of lateral soil resistance ...

ABSTRACT Offshore pipelines are commonly buried in seabed for protection against damage, for better insulation and to prevent upheaval buckling induced by thermal and pressure loadings. The uplift resistance provided by the backfill soil is an important design parameter when determining the correct burial depth for a given pipeline.
