With the global economy still in recovery, it is more important than ever for individuals and organizations to be aware of their money and its potential for both depreciation and growth. Banking, Finance, and Accounting: Concepts, Methodologies, Tools, and Applications investigates recent advances and undertakings in the financial industry to better equip all members of the world economy with the tools and insights needed to weather any shift in the economic climate. With chapters on topics ranging from investment portfolios to credit unions, this multi-volume reference source will serve as a crucial resource for managers, investors, brokers, and all others within the banking industry.

This text is intended for a first course in introductory financial accounting. It was updated to reflect current International Financial Reporting Standards (IFRS). For example, it reflects the recent change in IAS38, para. 98, allowing the use of multiple methods in amortizing intangible assets. It focuses on core Introductory Financial Accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. Excluded are advanced topics that are covered in Intermediate Financial Accounting, such as leases and bond amortization. The text takes a corporate approach (vs. beginning with a sole proprietorship emphasis and then converting to a corporate approach); this consistency throughout the book reduces confusion for the introductory student. The book covers all essential topics: the accounting cycle, merchandising, assigning costs to inventory, cash and receivables, property, plant and equipment, debt financing, equity financing, statement of cash flows, financial statement analysis, and proprietorships and partnerships. Additionally, this version of the open text is supported by Lyryx Learning, offering at an affordable price editorial services to develop and adapt the content, formative online assessment, course supplements, and daily support to both the students and instructors.

Globalization has fueled the growth of entrepreneurship. Starting a new venture involves risk taking as well as capital investment. This book delves into all the varied aspects of entrepreneurship. The impact of economic policies, finances, opportunity and capacity are some of the topics covered in this text. It will prove

beneficial to students, scholars, professionals, aspiring entrepreneurs, etc.

This book introduces accountants and managers to an historical perspective of corporate financial reporting to employees. It presents a resource for research and practice based upon a literature that for its pre-1970 decades has been largely unfamiliar to contemporary educators, researchers and practitioners alike. In addition the pieces not only provide an historical view of issues and arguments, but of actual reporting practice and audience responses. For the students and researcher, these readings offer a first-hand glimpse into the intentions of employee report producers, the critiques of observers at the time, and the requirements of employees in some instances. For report producers, managers and accountants, it reveals some of the reporting traditions that we have inherited today as well as reporting practices that have already been recommended, tried and tested in the past. The readings selected cover a sixty year period from the 1920s through to the close of the 1970s, with the exception of the first contribution by Lewis, Parker and Sutcliffe (1984) that serves as the historical overview and analysis for the whole text.

The success of every business in the hospitality industry depends on maximizing revenues and minimizing costs. This Ninth Edition continues its time-tested presentation of fundamental concepts and analytical techniques that are essential to taking control of real-world accounting systems, evaluating current and past operations, and effectively managing finances toward increased profits. It offers hands-on coverage of computer applications and practical decision-making skills to successfully prepare readers for the increasingly complex and competitive hospitality industry.

This book provides insights into the evolving debate regarding the mobilization of domestic resources and the crucial role that financial development can and should play in this regard, exploring aspects of the financial development – domestic resource mobilization nexus, including country case studies.

Looking back over the last decade it can be said with some justification that significant progress has been achieved on the way towards fully integrated financial markets in Europe. The 1993 Internal Market initiative and the Euro introduction in 1999/2002 constitute important milestones. The integration process has further been intensified by market developments like the surge in mergers and acquisitions and by technological innovations like internet based distribution. As a result, some market segments today do no longer have a national character. Nevertheless, this success should not obscure the fact that integration of financial services markets is still a long way from the level of integration that exists within national markets. Particularly for retail financial services national borders still constitute a considerable de facto barrier. The absence of frequent direct cross border links between financial service providers and retail consumers holds true despite the fact that the Euro has made product comparisons easier and that the internet has reduced information costs to a considerable extent.
