Alan Turing: "The Founder of Computer Science" - BCS ...
Alan Turing Year 2012 continues apace with a variety of events inspired by the great contribution made by the mathematician and code breaker to the history of computer science and modern biology. This month we continue to explore Turing's influence on the strand of art that is interested in the intersection of arts and technology. Due to the secret nature of the work Turing (and others) did ...

computers. Alan Turing took an early lead on the theory side, along with fellow mathematicians on both sides of the Atlantic.

BCS

'Alan Turing, the so-called father of computer science, was nominated by a lot of the public, but it wasn't a popularity contest. We looked at every single one of those 989 nominations as a committee; including mathematicians, astronomers, chemists, physicists... and after some very interesting debates, we chose a shortlist of 12.

Alan Turing and his
Contemporaries - British
Computer Society

Alan Turing was clearly a man ahead of his time. In 1950, at the dawn of computing, he was already grappling with the question: "Can machines think?" This was at a time when the first general purpose computers had only just been built. The term artificial intelligence had not even been coined. John McCarthy would come up with the term in 1956, two years after Alan Turing's untimely death. Yet ...

discernable deep down within today's hardware and software.

Alan Turing is a patron saint of Manchester, remembered as the Mancunian who won the war, invented the computer, and was all but put to death for being gay. Each myth is related to a historical story. This is not a book about the first of those stories, of Turing at Bletchley Park. But it is about the second two, which each unfolded here in Manchester, of Turing's involvement in the world's first computer and of his refusal to be cowed about his sexuality. Manchester can be proud of Turing, but can we be proud of the city he encountered?

In this 2013 winner of the

This book explores how digital culture is transforming museums in the 21st century. Offering a corpus of new evidence for readers to explore, the authors trace the digital evolution of the museum and that of their audiences, now fully immersed in digital life, from the Internet to home and work. In a world where life in code and digits has redefined human information behavior and dominates daily activity and communication, ubiquitous use of digital tools and

technology is radically changing the social contexts and purposes of museum exhibitions and collections, the work of museum professionals and the expectations of visitors, real and virtual. Moving beyond their walls, with local and global communities, museums are evolving into highly dynamic, socially aware and relevant institutions as their connections to the global digital ecosystem are strengthened. As they adopt a visitor-centered model and design visitor experiences, their priorities shift to engage audiences, convey digital collections, and tell stories through exhibitions. This is all part of crafting a dynamic and innovative museum identity of the future, made whole by

This authoritative reference work will provide readers with a complete overview of artificial intelligence (AI), including its historic development and current status; existing and projected AI applications; and present and potential future impact on the United States and the world.

Some people believe that artificial intelligence (AI) will revolutionize modern life in ways that improve human existence. Others say that the promise of AI is overblown.

Still others contend that AI applications could pose a grave threat to the economic security of millions of people by taking their jobs and otherwise rendering them "obsolete"—or, even worse,
