This chapter aims to report briefly on these activities by presenting some significant insights into practical results obtained by the benchmark partners in using the SODAS software package as described in chapter 14 below.

Classical data values are single points in p -dimensional space; symbolic data values are hypercubes (broadly defined) in p -dimensional space (and/or a cartesian product of p distributions). While some datasets, be they small or large in size, naturally consist of symbolic data, many symbolic datasets result from the aggregation of large or extremely large classical datasets into smaller more managably sized datasets, with the aggregation criteria typically grounded on
