The male reproductive system consists of external organs. The testes in the scrotum produce the male gamete, sperm, which is ejaculated in seminal fluid by the penis. The female reproductive system primarily consists of internal organs. The female gamete, ovum, is produced in the ovaries and is released monthly to travel to the uterus via the Fallopian tubes.

The internal anatomy of the male reproductive system includes the urethra, vas deferens, and epididymis. Beginning with the opening at the tip of the penis, the urethra is the internal vessel that conducts semen, the sperm-containing fluid, and urine out of the body. It leads to the vas deferens, the tube that brings semen to the urethra.
