Applying International Accounting Standards is an exciting new textbook written to meet the needs of accounting students and practitioners in understanding the complexities and applying the stable platform of International Accounting Standards. It does not cover all International Accounting Standards, concentrating on those that are not related to specific industries. The text offers a step-by-step introduction to the financial reporting procedures outlined within the new International Financial Reporting Standards (IFRS). With the inception of the IFRS on 1 January 2005, students studying accounting will need to possess a thorough conceptual and practical understanding of the new financial reporting requirements contained within the majority of the 41 IFRS. The focus of this text is on the interpretation, analysis, illustration and application of the scope and purpose of the new financial reporting processes of the

This is a much-needed work in the financial literature, and it is the first book ever to analyse the use of Special Purpose Acquisition Companies (SPACs) from a theoretical and practical perspective. By the end of 2020, more than 240 SPACs were listed in the US (on NASDAQ or the NYSE), raising a record \$83 billion. The SPAC craze has been shaking the US for months, mainly because of its simplicity: a bunch of investors decides to buy shares at a fixed price in a company that initially has no assets. In this way, a SPAC, also known as a "blank check company", is created as an empty shell with lots of money to spend on a corporate shopping spree. Could the trend be here to stay? Are SPACs the new legitimate path to traditional IPO? This book tackles those questions and more. The author provides a thorough analysis of SPACs including their legal framework and how they are used as a risk mitigation tool to

structure transactions. The main objectives of the book are focused on finding a working definition for SPACs and theorising on their origins, definition, and evolution; identifying the objectives of financial regulation within the context of the recent financial crisis (2007–2010) and the one that is currently unfolding (Covid-19); and also describing practical examples of SPACs through a comparative study that, for the first time, outlines every major capital market on which SPACs are listed, in order to identify a possible international standard of regulation. The book is relevant to academics as well as policymakers, international financial regulators, corporate finance lawyers as well as to the financial industry tout court.
