This classic guide to human anatomy will be welcomed by students and health professionals alike?as well as anyone fascinated by science. Organized by anatomical region?the most common method of studying the body in anatomy and biology courses?and rigorously indexed, this essential medical reference is the fruit of an intensive collaboration between internationally recognized scientists, dissectors, and graphic artists. It's astoundingly rich in information: 650 detailed illustrations, including topographical, schematic, and sectional images, provide a comprehensive map of the human body's organ systems in lifelike full color. From systemic anatomy and the body wall to the central nervous system, visual organs, and orbital cavity, it's all here. Superbly drawn and meticulously labeled illustrations follow the most current International Anatomical Terminology, adopted by the International Federation of Associations of Anatomists in 1998. The Color Atlas of Human Anatomy is the authoritative, practical guide to the body's complexities.

Atlas of Human Body: Central Nervous System and Vascularization is a multidisciplinary approach to the technical coverage of anatomical structures and relationships. It contains

surface and 3D dissection images, native and colored cross sectional views made in different planes, MRI comparisons, demonstrations of cranial nerve origins, distribution of blood vessels by dissection, and systematic presentation of arterial distribution from the precapillary level, using the methyl metacrylate injection and subsequent tissue digestion method. Included throughout are late prenatal (fetal) and early postnatal images to contribute to a better understanding of structure/relationship specificity of differentiation at various developmental intervals (conduits, organs, somatic, or branchial derivatives). Each chapter features clinical correlations providing a unique perspective of side-by side comparisons of dissection images, magnetic resonance imaging and computed tomography. Created after many years of professional and scientific cooperation between the authors and their parent institutions, this important resource will serve researchers, students, and doctors in their professional work. Contains over 700 color photos of ideal anatomical preparations and sections of each part of the body that have been prepared, recorded, and processed by the authors Covers existing gaps including developmental and prenatal periods, detailed vascular anatomy, and neuro anatomy Features a comprehensive alphabetical index of structures for ease of use Features a companion website which contains access to all images within the book
