The EOS 5DS was a follow-up to the 5D Mark III and brought with it new technology and a number of significant upgrades. It features a full-frame 50.6MP CMOS sensor. The 5DS is not something you are likely to use for video as it can only capture 1080p up to 30 fps. Although it would still be a good option for stills and timelapse work. Canon EOS 5DS R

Canon EOS 5DsR/5Ds: My Experience. March 5, 2016 G Dan Mitchell 6 Comments. These days I use the Canon EOS 5DsR for much of my photography - particularly my landscape, nature, wildlife, and long-exposure night photography. Since people often ask me about the camera, I have decided to offer this write-up. I'll try to cover some things about the camera that work well for me, acknowledge one or two very small issues, and consider the kinds of photographers for whom it (or its twin, the ...

Canon has added to its EOS 5D range with the launch of two 50MP cameras, the 5DS and the 5DS R. Both cameras are high resolution full frame models, primarily aimed at stills photographers. The only difference between the models is that the 'S' has an optical low-pass filter, while the 'S R' has a self-cancelling filter (the same relationship as Nikon's D800 and D800E models shared).

Canon has recently released two new cameras, the Canon EOS 5DS and Canon EOS 5DSR with 50.6 megapixels. They are said to be ideal for taking pictures commercially or for use in art. With their high resolution and advanced auto focus feature, compared to previous Canon material, they provide users with a great experience when using the cameras for snapping photos. They have been deemed the highest resolution DSLR cameras that have ever been produced.

No need to hop on a plane to the East Coast! California has beautiful fall foliage, especially in the Sierra Nevada, which glows red and golden every year with aspens, cottonwoods, dogwoods, maples, and oaks. This compact, lively guide shows visitors where and how to capture the best images of turning leaves in the eastern Sierra, Tahoe, and Yosemite, as well as destinations off the beaten track. Mitchell's advice is suitable for photographers of all levels, whether tourists who want to share their experience with friends or professionals seeking advice for dealing with the special challenges of fall photography. More than a manual of technical considerations, though, California's Fall Color encourages us to be overwhelmed by beauty--to take home an image containing the color but, just as importantly, the essence of that sublime feeling.

The Visual Toolbox: 60 Lessons for Stronger Photographs is author David duChemin's conception of a "curriculum" for the first year of a photography school that doesn't exist, but could. It's what he calls "the bones"—a year's worth of lessons and assignments for photographers who want to do more than just master their cameras; it's for those who want to create photographs. It's for photographers who are stuck and for those having a hard time making it an aesthetic art and not merely a technical craft. The book is targeted at any aspiring, hobbyist, or pro photographer who can benefit from sitting with a photographer and teacher who has learned—and is still learning—these lessons the hard way and wants others to benefit from them. This book is not made up of magic bullets or quick tips, but if the reader studies the book's lessons and completes the assignments, he or she will become a stronger photographer faster than they would by just picking up a bunch of quick tips and platitudes out there in other books. With 60 short "microchapter" lessons, where David pairs an explanation of the concept ("Learn to Isolate") with an active assignment for the reader to complete, every one of the lessons is a stepping stone to becoming more proficient with the tools of the photographic art, and the means by which the reader can create stronger experiences with their images. Some of these tools are the camera and lens, but many of them have to do with composition, balance, tension, and scale—the tools of the visual language itself—or with being present, perceptive, and learning to see. And they're all practical, get-out-there-and-do-it kind of lessons, because in the end one doesn't truly improve her photography by only reading from a book, but from time spent making photographs. This book is a collection of 60 guided steps in that direction.

An introduction to the Canon EOS 40D camera examines the purpose and function of the camera's basic controls and how to use them, accompanied by explanations of custom functions, selecting and using lenses, accessories, working with light and exposure, and working with RAW capture. Original. (All Users)

Tilt and shift lenses offer tremendous creative possibilities for users of digital SLR and mirrorless cameras. This practical book explains the techniques that will help you take better photos - photos that don't distort or lose focus. Assessing the benefits and pitfalls of a range of lenses, adapters, software and editing techniques, it guides you through the practicalities of working with these lenses and gives you the skills to use them to best effect. With stunning examples throughout, this book gives an overview of the different lenses available, and tips on how adapters can give tilt/shift options when using old medium-format lenses. It gives advice on how simple lens shift can change the entire look of your photos, and techniques for using lens tilt for focus control and close-up working. Stunning examples show the use of tilt and shift lenses across a range of available focal lengths, both tripod-mounted and handheld.

In 'Getting Started in Photography," Photographer and writer Shawn M. Tomlinson creates a quick guide to help budding photographers. The book includes equipment advice, exercises for becoming better, photo processing basics and more. From the book: "What anyone starting out needs is, well, a starting point. Some basic information about equipment and technique to get everything moving. And, hey, I'm here to help." In part two, 'Great Starter DSLR: Revisiting the Sony A100,' he takes an in-depth look at the camera and continues his series devoted to helping budding photographers get started without breaking the bank. In this case, Tomlinson considers the first Sony DSLR, the A100. From the book: "After waiting the proper mourning time for Minolta - about a year - Sony took the black armband off and unveiled its first DSLR, the A100. And why is this important now? It's vitally important if you are a beginning photographer and want to get a great DSLR and great lenses that won't mortgage your house."
