Recently, discrete fractional calculus with applications [[20], [21], [22], [23], [24], [25], [26]] was proposed. It was defined on an isolated time scale. It can avoid cumulative errors of continuous methods when the defined domain is a discrete set. It also becomes possible for long-term calculation.

The author's purpose in this dissertation is to introduce, develop and apply the tools of discrete fractional calculus to the arena of fractional difference equations. To this end, we develop the Fractional Composition Rules and the Fractional Laplace Transform Method to solve a linear, fractional initial value problem in Chapters 2 and 3. We then apply fixed point strategies of Krasnosel'skii and Banach to study a nonlinear, fractional boundary value problem in Chapter 4.
