Essential Antenatal Perinatal And Postpartum Care

The aim of PCPNC is to provide evidence-based recommendations to guide health care professionals in the management of women during pregnancy, childbirth and postpartum, and newborns, and post abortion, including management of endemic diseases like malaria, HIV/AIDS, TB and anaemia. The PCPNC is a guide for clinical decision-making.

WHO | Pregnancy, childbirth, postpartum and newborn care

The first step in providing maternal and newborn services during the COVID-19 pandemic is to determine pregnancy status. Once a woman discovers she is pregnant, she will either contact a Community Health Worker (CHW) to provide an antenatal care (ANC) assessment or visit a health center facility directly to confirm her pregnancy and receive ANC.

The term perinatal depression (PD) encompasses both antenatal and postnatal depression. Dr Lumu adds that women who have experienced PD in their past pregnancies, are at risk of having PD in their next pregnancies. [If a mother has had a previous history of PD, it is essential that they inform their healthcare provider.](#)

Mental Health Check: Is it baby blues, perinatal ...

The aim of Pregnancy, childbirth, postpartum and newborn care guide for essential practice (PCPNC) is to provide evidence-based recommendations to guide health care professionals in the management of women during pregnancy, childbirth and postpartum, and post abortion, and newborns during their first week of life, including management of endemic diseases like malaria, HIV/AIDS, TB and anaemia.

Pregnancy, Childbirth, Postpartum, and Newborn Care ...

Placenta-mediated pregnancy complications are a major challenge in the management of maternal-fetal health. Maternal thrombophilia is a suspected risk factor, but the role of thrombotic processes in these complications has remained unclear. Endothelial protein C receptor (EPCR) is an anticoagulant protein highly expressed in the placenta. EPCR autoantibodies and gene variants are associated ...

This guide provides a full range of updated, evidence-based norms and standards that will enable health care providers to give high quality care during pregnancy, delivery and in the postpartum period, considering the needs of the mother and her newborn baby. All recommendations are for skilled attendants working at the primary level of health care, either at the facility or in the community. They apply to all women attending antenatal care, in delivery, postpartum or post abortion care, or who come for emergency care, and to all newborns at birth and during the first week of life (or later) for routine and emergency care. This guide is a guide for clinical decision-making. It facilitates the collection; analysis, classification and use of relevant information by suggesting key questions, essential observations and/or examinations, and recommending appropriate research-based interventions. It promotes the early detection of complications and the initiation of early and appropriate treatment, including time referral, if necessary. Correct use of this guide should help reduce high maternal and perinatal mortality and morbidity rates prevalent in many parts of the developing world, thereby making pregnancy and childbirth safer.

The gold-standard guide from the AAP and ACOG -- newly updated and more valuable than ever! Significantly revised and updated, the new 8th edition of this bestselling manual provides the latest recommendations on quality care of pregnant women, their fetuses, and their newborn infants. Jointly developed by the American Academy of Pediatrics (AAP) and American College of Obstetricians and Gynecologists (ACOG), this unique resource addresses the full spectrum of perinatal medicine from both the obstetric and pediatric standpoints. New in the 8th editon: New section on suggested levels of maternal care from birth centers to Level IV institutions New sections on screening for preterm delivery risk added to chapter on antepartum care New topics covered include the timing of cord clamping, the need (or not) for bedrest, and updates in hypertension Guidance regarding postpartum contraception recommendations has been expanded New section on mosquito-borne illnesses (including Zika) New section on infections with high-risk infection control issues Updated recommendations on neonatal resuscitation, screening and management of hyperbilirubinemia, and neonatal drug withdrawal.

The second edition of the comprehensive and award-winning text on prenatal and postnatal care The updated edition of Prenatal and Postnatal Care offers a comprehensive text for the care of the woman during the childbearing year. The expert author team presents information needed to master foundational knowledge in anatomy, physiology, psychology, culture, and structure of preconception, prenatal and postnatal care, and the management of common health problems in the childbearing year. This edition has been revised throughout and contains 6 new chapters on the following topics: prenatal ultrasound, triage of the pregnant woman, assisting women to development confidence for physiologic birth, pregnancy after infertility, oral health, and issues around diversity and inclusion in prenatal and postnatal care. Additional highlights include new and updated content on pregnant women in the workplace, prenatal genetic testing, trauma-informed care, and transgender pregnancy care. The second edition also includes commonly used complementary therapies and offers more detailed information on shared decision-making and planning for birth. Prenatal and Postnatal Care: Provides expanded faculty resources with case studies and test questions for each chapter Offers a comprehensive text that covers essential aspects of prenatal and postnatal care of the childbearing woman Builds on the edition that won the Book of the Year award from the American College of Nurse Midwives (ACNM) in 2015. This revised, authoritative text is an ideal resource for midwifery, nurse practitioner and physician assistant students, and healthcare providers working with pregnant and postpartum women.

The second edition of the comprehensive and award-winning text on prenatal and postnatal care The updated edition of Prenatal and Postnatal Care offers a comprehensive text for the care of the woman during the childbearing year. This revised, authoritative text is an ideal resource for midwifery, nurse practitioner and physician assistant students, and healthcare providers working with pregnant and postpartum women.

Since childbirth became a medicalized - and usually hospitalized - event a century ago, women's and families' psychosocial needs have been relegated to a somewhat peripheral role within the clinically focussed hierarchy of medical care. This text reinstates psychosocial issues as a primary focus of care, together with clinical excellence. Family-centred care is a familiar phrase in today's maternity services, with professional guidelines and hospital policies including the term in their care protocols; however, few definitions, and no specific standards, for family-centred care exist. While all caregivers and care services are likely to define their care as sensitive to women's needs, and family-centred, the actual implementation of a family-centred approach - despite it being a current fashion in care - is still inadequate. This book clearly defines family-centred perinatal care, and outlines how truly family-centred care can, and should, be implemented, and how, and where, this has been done.

Pregnancy, childbirth, postpartum and newborn care: a guide for essential practice (3rd edition) (PCPNC), has been updated to include recommendations from recently approved WHO guidelines relevant to maternal and perinatal health. These include pre-eclampsia & eclampsia; postpartum haemorrhage; postnatal care for the mother and baby; newborn resuscitation; prevention of mother-to- child transmission of HIV; HIV and infant feeding; malaria in pregnancy, interventions to improve preterm birth outcomes, tobacco use and second-hand exposure in pregnancy, post-partum depression, post-partum family planning and post abortion care. The aim of PCPNC is to provide evidence-based recommendations to guide health care professionals in the management of women during pregnancy, childbirth and postpartum, and newborns, and post abortion, including management of endemic diseases like malaria, HIV/AIDS, TB and anaemia. The PCPNC is a guide for clinical decision-making. All recommendations are for skilled attendants working at the primary level of health care, either at the facility or in the community. They apply to all women attending antenatal care, in delivery, postpartum or post abortion care, or who come for emergency care, and to all newborns at birth for routine and emergency care.

Within the continuum of reproductive health care, antenatal care provides a platform for important health-care functions, including health promotion, screening and diagnosis, and disease prevention. It has been established that, by implementing timely and appropriate evidence-based practices, antenatal care can save lives. Endorsed by the United Nations Secretary-General, this is a comprehensive WHO guideline on routine antenatal care for pregnant women and adolescent girls. It aims to complement existing WHO guidelines on the management of specific pregnancy-related complications. The guidance captures the complex nature of the antenatal care issues surrounding healthcare practices and delivery, and prioritizes person-centered health and well-being --- not only the prevention of death and morbidity --- in accordance with a human rights-based approach.

Essay from the year 2006 in the subject Medicine - Pediatrics, grade: 60% (England), Glasgow Caledonian University, 34 entries in the bibliography, language: English, abstract: No matter how far one looks back in the history of mankind: As long as humans are born by women there were midwives and there will be midwives. The knowledge of 'wise women' led already in the Middle Ages to uncertainty - particularly among the physicians and church princes. Midwives were strongly affected by witch-hunt. Many were burnt at the stake, because people did not trust their knowledge and their art [I](#) because of ignorance or eagerness for power. At that time midwives were considered to work in the function of a gynaecologist or as a person with healing skills which got their knowledge as a gift. They acquired their knowledge through the knowledge of older women and own practical experience. The current and historical literature about the midwife art gives an idea of this traditional occupation of woman (Skolkik 2001). This knowledge developed more and more and passed on since generations. But nowadays the situation has changed: Many midwives are working on their own with their own experiences and their own unverified methods of practice. This already begins in the time of the midwifery training without standards in many working areas. The care of the umbilical cord of the baby is in the homey care of the midwife again and again in discussion. The unverified methods of practice in midwifery tasks are widespread in different working fields and should initiate a development of caring with evidence-based background. Dannenfeldt stated in their work about the significance of the salutogenic concept of the midwifery work that in this work it is important to deal with scientific topics for achieving a more effective and more professional work. This statement is emphasised by the Schweizer Hebammenverband. They mentioned that the midwifery work is including the task of assuring and further development of their quality of work. In 2002 the World Health Organisation (WHO) mentioned in their training modules about Essential Antenatal, Perinatal and Postpartum Care that throughout the world there are numerous methods of caring for the cord, but the most effective is to use NO application to the cord but to keep it clean and allow it to dry over the first two days. In context to this statement this essay works out the different actually used methods of umbilical cord care and their advantages and disadvantages in comparison to the recommendations of the WHO.

The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

A comprehensive guide to all aspects of the development, adaptation, and use of home-based maternal records as an exciting new tool for reducing maternal and perinatal morbidity and mortality. Home-based maternal records, which are retained by the woman and serve as her "passport" to appropriate health care, are simple cards designed to facilitate the easy recording and interpretation of comprehensive information on the health status of a woman before her first pregnancy, during the current pregnancy, delivery, postpartum and neonatal periods, and during two subsequent pregnancies. The cards can also be used to record information during the periods between pregnancies and on the woman's breast-feeding, family planning, and tetanus toxoid immunization status. Though simple in concept and design, the cards have demonstrated their effectiveness as a tool for the early detection of risk factors, the promotion of timely referral, the monitoring of women's health for periods of up to 10 years, and the education of women about health, nutrition, and family planning. Home-based maternal records have also shown their potential to encourage more appropriate referrals and better utilization of health services, to promote self-diagnosis and self-care, to foster greater community involvement, and to facilitate the collection of health information. Designed to help program managers and administrators introduce and use home-based maternal records to the greatest effect, the book draws on experiences and lessons learned during the extensive field testing of home-based. While a WHO prototype record is presented as a model, emphasis is placed on the best ways to adapt this prototype to local conditions, test its effectiveness, pinpoint problems, and find solutions, even when resources are scarce and populations largely illiterate.
