If you want to find the value of the last non-blank cell in a row or column in Excel, you can use a formula based on the LOOKUP function to achieve it. Here is the formula we are using is: Here is the formula we are using is:

~~How to Find the First or Last Non-blank Cell ... - Excel How~~

For example, if you wanted to find the last numeric value in column A, you would use the following formula: =INDEX(A:A,MATCH(9.999999999999999E+307,A:A)) For example, if you wanted to find the last numeric value in range C2:C10, you would use the following formula: =INDEX(C2:C10,MATCH(9.999999999999999E+307,C2:C10))

~~MS Excel: Get contents of last cell in a range that has data~~

Reset last cell with VBA. If you are familiar with VBA code, I will tell you a VBA code which can quickly reset the last cell of the current worksheet. 1. Press Alt + F11 keys simultaneously, and a Microsoft Visual Basic for Applications window pops. 2. Click Insert > Module, then paste below VBA code to the popping Module window. VBA: Reset last cell.

~~How to reset last cell in Excel? - ExtendOffice~~

Use VBA to Find the Last Row in Excel Define the cell or the range from where you want to navigate to the last row. After that, enter a dot to get the list of properties and methods. Select or type "End" and enter a starting parenthese.

~~How to Find Last Row, Column, and Cell using VBA in Excel~~

Blank cells with formulas such as "" or ' are not considered blank (even by the ISBLANK Excel function). Dim rng As Range, lastCell As Range Set rng = Range ("C3").CurrentRegion ' or Set rng = Sheet1.UsedRange.CurrentRegion Set lastCell = rng (rng.Rows.Count, rng.Columns.Count)

~~excel vba - Last cell in Range.CurrentRegion | excel vba ...~~

Excel only resets the last cell when the workbook is saved. So if the user or macro deletes the contents of some cells, then this method will not find the true last cell until after the file is saved. It finds the last used cell and NOT the last non-blank cell. Other Methods for Finding the Last Cell
