(these are the basic components of proteins)
Now, each amino acid is coded for by a triad sequence of bases, namely Adenine, Cystine, Thyamine and Guanine (Thyamine is replaced by Uracil in RNA, if we are referring to codons instead of anticodons).

Why is our genetic code

codons. In fact, methionine and tryptophan are the only amino acids specified by a single codon.

Importantly, the reverse isn't true: each codon specifies just one amino acid or stop signal. Thus, there's no ambiguity (uncertainty) in the genetic code.
