Processing in magnetic
exploration removes the
extraneous variations
directly from the
observations, rather than
modeling the field at the
observation site as in
gravity data processing.
However, the result is the
same. It is equivalent to
the anomaly obtained by
subtracting the theoretical
field from the observations.

Overview. This combination of textbook and reference manual provides a comprehensive account of gravity and magnetic methods for exploring the subsurface using surface, marine, airborne, and satellite measurements. It describes key current topics and techniques, physical properties of rocks and other Earth materials, and digital data analysis methods used to process and interpret anomalies for subsurface information.
