Our environmental problems are huge, and they require careful attention and action. The twenty-first century will be a crucial time in human history, a time when we must find solutions that allow people on all parts of our planet to live in a clean, healthy environment and have the resources they need for a good life. - p. 5.

Read Book Holt Environmental Science Assessment Chapter Test Waste

Scientists have long sought to unravel the fundamental mysteries of the land, life, water, and air that surround us. But as the consequences of humanity's impact on the planet become increasingly evident, governments are realizing the critical importance of understanding these environmental systems and investing billions of dollars in research to do so. To identify high-priority environmental science projects, Grand Challenges in Environmental Sciences explores the most important areas of research for the next generation. The book

goal is not to list the world's

biggest environmental problems. Rather it is to determine areas of opportunity that "with a concerted investment" could yield significant new findings. Nominations for environmental science's
grand challenges were solicited from thousands of scientists worldwide. Based on their responses, eight major areas of focus were identified "areas that offer the potential for a major scientific breakthrough of practical importance to humankind, and that are feasible if given major new funding. The book further pinpoints four areas for immediate action and investment.

Read Book Holt Environmental Science Assessment Chapter Test

This publication, prepared jointly by the WHO, the World Meteorological Organization and the United Nations Environment Programme, considers the public health challenges arising from global climate change and options for policy responses, with particular focus on the health sector. Aspects discussed include: an overview of historical developments and recent scientific assessments; weather and climate change; population vulnerability and the adaptive capacity of public health systems; the IPCC Third Assessment report; tasks for public health scientists; the health impacts of climate extremes; climate change, infectious diseases and the level of disease burdens; ozone depletion, ultraviolet radiation and health; and
