An Introduction to Hydropower Concepts and Planning

Description : Hydropower engineering deals with the study of hydropower. It concerns itself with the design, construction and management of machines and structures which can be used to produce hydroelectric power. This study is generally used in textile mills, ore mills, dock cranes and also for irrigation.

Hydropower generation systems are mainly classified into the conventional and the pumped storage types as described below. This Manual describes generation systems of conventional and pumped storage types. The medium development scale or conventional type covers 5MW to 500MW, and those of pumped storage type cover 100MW to 1,000MW.
