The Rover V8 remained with Land Rover when it was sold to Ford by BMW. Although Land Rover has switched to the Jaguar AJ-V8 engine for new applications, they wanted production of the engine to continue, and they arranged for production to restart in Weston-super-Mare under MCT, an engineering and manufacturing company. MCT will continue limited production of the engine for the foreseeable future, supplying engines for aftermarket and replacement use.

Rover V8 - the Story of the Engine tells the fascinating story of the engine that created a legend in its own lifetime. Starting life as a General Motors design in 1961, but withdrawn three years later in favour of cheaper technology, it reached Rover by chance in the mid-1960s. Few other British companies then had V8 engines in production, and Rover

immediately gained a special status when the V8 entered UK production during 1967. This was an extraordinarily compact design and also extraordinarily light, thanks to its all-aluminium alloy construction. It was not a temperamental high-performance engine, but had a well-proven and simple architecture that made it both reliable and easy to work on. Small wonder, then, that the Rover V8 was bought by sports car makers who needed a light, compact and powerful engine. Small wonder that Rover kept it in production for so long, developing multiple different sizes and versions. Small wonder that the engine is still revered by Rover and Land Rover enthusiasts today, or that its popularity as an aftermarket conversion has ensured that it remains in small-volume production, half a century after entering production in the UK.
