The world of the coral reef is one of the most diverse ecosystems on our planet. The sheer number of life forms on the reef rivals even that of the tropical rain forests. Built over thousands of years by tiny calcium-producing organisms, the reefs are a haven for countless thousands of life forms, some of which seem totally alien in form.

Coral reefs provide an important ecosystem for marine life, offering food and shelter among their crevices and branches for animals including fishes, molluscs, sea urchins and sponges. Corals are found in all of Earth's oceans, from tropical to freezing temperatures, however they only build coral reefs in warm, shallow seas in the tropics.

The world of a coral reef community is one of color, bizarre-looking life forms and intrigue. The moment you place your face in the water and gaze downward in a typical coral reef setting, it is all but impossible not to feel an almost overwhelming sense of wonderment. Everywhere you look, brilliantly colored fishes catch your eye. Some appear to cruise lazily, while others dart about in a hurried fashion.

**Life On Coral Reef - YouTube**

An artificial reef is a human-created underwater structure, typically built to promote marine life in areas with a generally featureless bottom, to control erosion, block ship passage, block the use of trawling nets, or improve surfing.. Many reefs are built using objects that were built for other purposes, for example by sinking oil rigs (through the Rigs-to-Reefs program), scuttling ships ...
