Spindle fibers attach to the homologous chromosome pairs. # 5- Metaphase 1. Individual chromatids move to each end of the cell. # 9- Anaphase 2. Crossing over (if any) occurs. # 3- Prophase 1. Compare the number and type of cells that result from meiosis and mitosis. Mitosis makes two diploid cells that are somatic and identical to each other, whereas meiosis makes 4 haploid cells that are gametes and that are all different from each other.

Meiosis Quiz Study Guide Flashcards | Quizlet
In meiosis, chromosome pairs separate. Telophase I. In meiosis, two daughter cells form. Prophase II. In meiosis II, the nucleolus disappears. Telephase II. In meiosis II, four haploid cells are formed. Half as many, after meiosis, each cell has this many chromosomes compared to the original cell.

meiosis Flashcards and Study Sets | Quizlet
1 cell division. Somatic(body cells) Makes 2 identical diploid sister cells. #daughter= # parent chromosomes(46) Assexual reproduction(identical) Meiosis: Gamete cells for reproduction. 2 cell division. Occurs in gametes.

Unit 6- Meiosis and Genetics STUDY GUIDE Flashcards | Quizlet
Meiosis Quiz. Meiosis is a two-part cell division process in organisms that sexually reproduce. In some respects, it is very similar to the process of mitosis. Meiosis is divided into two parts: meiosis I and meiosis II. At the end of the meiotic process, there are four daughter cells rather than the two produced at the end of the mitotic process.

Meiosis Quiz - Test Your Knowledge of Meiosis
Meiosis is a two-part cell division process in organisms that sexually reproduce. Meiosis produces gametes with one half the number of chromosomes as the parent cell. In some respects, meiosis is very similar to the process of mitosis, yet it is also fundamentally different from mitosis. The two stages of meiosis are meiosis I and meiosis II.
