MikroTik Router basic configuration includes assigning IP addresses, configuring default gateway and enabling NAT for accessing internet. MikroTik Router basic configuration can be divided into 4 steps. Assigning WAN and LAN IP addresses; Gateway configuration; NAT configuration and; DNS configuration

Mikrotik Router Basic Configuration using Winbox (with ...

RouterOS allows to reset configuration with /system reset-configuration command This command clears all configuration of the router and sets it to the factory defaults including the login name and password ('admin' with empty password). For more details on default configurations see the list.

Configuration Management - RouterOS - MikroTik Documentation

Another important aspect of the new routing configuration is Routing Instance, which sets router-id and group peers in one instance. RouterOS adds a default instance which picks instance-id from any interface highest IP. The default BGP template by default is set to use the "default" instance.

ROSv7 Basic Routing Examples - RouterOS - MikroTik ...

Configuration Example Let's look at the basic firewall setup to protect the router. By default RouterOS firewall accepts everything, blocking is achieved by adding filter rule to drop everything at the end of all rules. For out router we want to allow only ICMP, ssh and winbox and drop the rest:

Basic Concepts - RouterOS - MikroTik Documentation

These tools will help you create several basic setups for MikroTik RouterOS. Both tools assume you are using the default configuration without the default firewall rules, or have a basic configuration in place and want to add additional functionality. The tools are under development and should be used at your own risk.

MikroTik Config

Basic L2TP/IpSec setup. This example demonstrates how to easily setup L2TP/IpSec server on Mikrotik router (with installed 6.16 or newer version) for road warrior connections (works with Windows, Android And iPhones). First step is to enable L2TP server:

Manual:Interface/L2TP - MikroTik Wiki

RADIUS Client Configuration in MikroTik RouterOS. After adding NAS device, we need to configure RADIUS Client in NAS. The following steps will show how to configure RADIUS Client in MikroTik RouterOS. Login to MikroTik Router using Winbox and full permission user. Click on RADIUS menu item from left menu bar. Radius window will appear.

MikroTik User Manager Installation and Basic Configuration ...

Note: Currently only CRS317-1G-16S+ and CRS309-1G-8S+ using RouterOS v6.41 and newer are capable of hardware offloading certain MPLS functions. CRS317-1G-16S+ and CRS309-1G-8S+ built-in switch chip is not capable of popping MPLS labels from packets, in a PE-P-PE setup you either have to use explicit null or disable TTL propagation in MPLS network to achieve hardware offloading.
