MySQL and JSP Web Applications addresses the challenges of building data-driven applications based on the JavaServer Pages development model. MySQL and JSP Web Applications begins with an overview of the core technologies required for JSP database development--JavaServer Pages, JDBC, and the database schema.

~~MySQL and JSP Web Applications: Data-Driven Programming~~...

In this tutorial, a Java web application communicates directly with a MySQL database using the Java Database Connectivity API. Essentially, it is the MySQL Connector/J JDBC Driver that enables communication between the Java code understood by the application server (the GlassFish server), and any content in SQL, the language understood by the database server (MySQL).

~~Creating a Simple Web Application Using a MySQL Database~~...

In this document, I instruct you to work with one of 3 databases: Oracle, MySQL or SQL Server. You need to run scripts to create some tables and necessary data for this example. ORACLE: -- Create table create table USER_ACCOUNT (USER_NAME VARCHAR2(30) not null, GENDER VARCHAR2(1) not null, PASSWORD VARCHAR2(30) not null, primary key (USER_NAME ...

~~MySQL and JSP Web Applications: Data-Driven Programming~~...

Apache Tomcat is an open-source web container that runs Java servlets and JSP pages in web applications. Tomcat is popular in the open source community, and is often used with MySQL. However, it's important to understand that GlassFish can provide an even better open-source solution for web applications than Tomcat, and for many developers might be a better choice to use with MySQL.
