Paper Roller Coaster Track If the track is too long, friction might eventually cause the coaster to come to a complete stop. To build a successful paper coaster, you had to take these factors into consideration. Since some energy is always lost to friction, your starting hill has to be taller than any other hills or loops in your coaster. If you had any long, flat segments, the marble might have rolled to a stop because of friction.

A grandfather and grandson share a special love Zach and his grandpa love all of the same things . . . except the roller coaster. His grandpa once rode it one hundred times! But Zach doesn't like the roller coaster. So when Grandpa goes on it every summer, Zach goes on the Big wheel with Grandma. She understands. But one summer, Grandma is gone and Grandpa is not the same. He misses her terribly. So does Zach. But he also wants his grandpa to be happy again. What will it take? Maybe a ride on the roller coaster? Heart-warming and uplifting, here is a story for every family that loves and cares for one another.

Have you always wanted to learn more about how roller coasters work? I'm not talking about the basic roller coasters use gravity! descriptions you're used to. I'm talking about learning in-depth about the nitty gritty engineering details, like: How do roller coaster engineers know what size motor is needed to pull the train to the top of the lift hill and how much will it cost to operate it? What material are the wheels made out of and how does it affect the performance of the ride? What is the difference between LIM and LSM propulsion? How does the control system on a racing or dueling coaster time up the near collision moments perfectly every single time? All of these questions and more are answered in the latest edition of *Coasters 101: An Engineer's Guide to Roller Coaster Design*. I thought it was great. It was a good first look at roller coaster design. It also gave great information and details about
