Peptic ulcer disease presents with gastrointestinal symptoms similar to dyspepsia and can be difficult to distinguish clinically. It can have potentially serious complications such as bleeding or perforation, with a high risk of mortality.¹ Optimal treatment with proton pump inhibitors (PPIs) facilitates healing and can prevent complications and recurrence.

Peptic ulcer disease | The BMJ

The most common causes of peptic ulcers are infection with the bacterium *Helicobacter pylori* (*H. pylori*) and long-term use of nonsteroidal anti-inflammatory drugs (NSAIDs) such as ibuprofen (Advil, Motrin IB, others) and naproxen sodium (Aleve). Stress and spicy foods do not cause peptic ulcers. However, they can make your symptoms worse.

Peptic ulcer - Symptoms and causes - Mayo Clinic

Peptic ulcer disease (PUD) is a break in the inner lining of the stomach, the first part

evergreen shrub, may also help improve symptoms and speed healing of peptic ulcers.

Peptic ulcer - Diagnosis and treatment - Mayo Clinic

Yes, a peptic ulcer can come back. If you smoke or take NSAIDs, peptic ulcers are more likely to come back. If you need to take an NSAID, your doctor may switch you to a different medicine or add medicines to help prevent a peptic ulcer. Peptic ulcer disease can return, even if you have been careful to reduce your risk.
