For courses in Introductory Algebra-based Physics. This text features a combination of unique pedagogical tools - exercises, worked examples, active examples, conceptual checkpoints - that provide the right tool at the right time and place. This text employs each tool when and where it can contribute most to developing students conceptual insight hand-in-hand with developing their problem-solving skills. - Modified/improved examples - The Picture the Problem step has been enhanced to better explain how students should approach sketching the problem. The Strategy step has been enhanced to better map out the thought process used in the Solution. - Additional Integrated Problems - Now make up

This text is specifically designed to provide students of medicine and biology with a treatment of physics related to their fields of study.

Assuming a basic understanding of physics, it develops ideas from first principles, using calculus and statistics when necessary but avoiding complex mathematics. Coverage includes translational and rotational equilibrium, with a description of the forces in the hip joint as a clinical example; exponential growth and decay, giving examples from pharmacology and physiology; nuclear physics and medical applications; X-ray production and their biological effects; diffusion and transport of solute in an infinite medium, and much more. Most chapters have been revised, and new material has been added on charged
