Sociolinguistics is concerned with the relationship between language use and social variables. One of the major debates in the field of sociolinguistics is whether to take social or linguistic factors as primary in investigating this relationship. As evidence of this debate, Wardhaugh (1992) and others make a distinction between sociolinguistics and the sociology of language.

Rather, it is varied and inconsistent for both the individual user and within and among groups of speakers who use the same language. People adjust the way they talk to their social situation.

Sociolinguistics and Second Language Acquisition is a comprehensive textbook that bridges the gap between the fields of sociolinguistics and second language acquisition, exploring the variety of ways in which social context influences the acquisition of a second language. It reviews basic principles of sociolinguistics, provides a unified account of the multiple theoretical approaches to social factors in second languages, summarizes the growing body of empirical research, including examples of findings from a wide range of second languages, and discusses the application of sociolinguistics to the second language classroom. Written for an audience that extends beyond specialists in the field, complete with summary tables, additional readings, discussion questions, and application activities throughout, this volume will serve as the ideal textbook for advanced undergraduate or graduate students of second language acquisition and instruction, and will also be of interest to researchers in the fields of second language acquisition, second language instruction and sociolinguistics.

A language teacher's role is not only critical in teaching a language, but also in teaching the cultures and societies that surround the language. Sociolinguistics and Language Teaching looks at the relationship between language and society and the pivotal part teachers play in shaping student perceptions of the language.

In many parts of the world the language education scenario is increasingly dynamic, as demographic, economic and social changes powerfully influence socio-political agendas in the sphere of language education. These in turn impact on complex issues such as linguistic pluralism, multiculturalism, and marginalization. This is especially so in the sphere of second language education where local, national and regional concerns often dominate the objectives underpinning policy choice and prioritisation. This volume brings together scholars and researchers from a wide range of different educational contexts and turns a sociolinguistic lens on some of the key areas of concern for researchers in language education: critical awareness of power and identity issues; competence in dealing with new sociolinguistic repertoires, modalities and literacies; ethical concerns for all who are involved. The 'case study' approach enables the reader to reflect on and critically engage with these issues in a rich variety of contextual situations, and the volume as a whole provides a useful overview of (second) language education in the world today.

Prior to the central theme of the discussion on sociolinguistics, it is important for us to clarify some of the definitions and terms related to the subject matter. First of all, let us have a look at 'sociolinguistics'. What is sociolinguistics? What does it deal with? What issues are probably relevant to the study of language teaching as this textbook is primarily designed for the students majoring in English language education?

This edited volume presents an empirical account of how neoliberal ideas are adopted on the ground by different actors in different educational settings, from bilingual education in the US, to migrant work programmes in Italy, to minority language teaching in Mexico. It examines language and education as objects of neoliberalization and as powerful tools and sites through which ideological principles underpinning neoliberal societies and economies are (re)produced and maintained (and with that, inequality and exclusion). This book aims to produce a complex understanding of how neoliberal rationalities are articulated within locally anchored and historical regimes of knowledge on language, education and society.
