Maple has at least four properties which make it very useful in problem solving. That means that you can type in commands and execute them, just like in the languages Basic and Logo. A Maple command is simply a string of characters ending in a semicolon ';' or colon ':'. For example, the command > 2+5, factor(x^2+5\*x +6),expand((x+y)^2);

**Problem-Solving Steps.** In statics, the majority of the topics focus on equilibrium. The remaining topics are either preparing you for solving equilibrium problems or setting you up with skills that you will use in later classes, like the computation of the moment of inertia. For equilibrium problems, the problem-solving steps are:
