is properly guided in the body and the guide action cannot fail.

**HANDBOOK - Castel Srl**

**Introduction** A pressure relief valve is a safety device designed to protect a pressurized vessel or system during an overpressure event. An overpressure event refers to any condition which would cause pressure in a vessel or system to increase beyond the specified design pressure or maximum allowable working pressure (MAWP).

**Pressure and Safety Relief Valves | Emerson US**

The compact spring-loaded safety valve is made of stainless steel (1.4571) for high chemical resistance. It is also available with bellows to balance back pressure and for high tightness to the outside, even at higher back pressures. The safety valve has a variety of connections and is wear resistant with hard-faced seat.
