Scientists quickly rejected this explanation, stating that these  
two forces were not strong enough to cause continental drift.  
Although modern scientists continue to reject Wegener's  
explanation for continental drift, the theory of drifting  
continents has gained wide acceptance in the scientific  
community.

A theory is underdetermined (also called indeterminacy of data to theory) if a rival, inconsistent theory is at least as consistent with the evidence. Underdetermination is an epistemological issue about the relation of evidence to conclusions. A theory that lacks supporting evidence is generally, more properly, referred to as a hypothesis.

Proponents of labeling theory support the theory's emphasis on the role that the attitudes and reactions of others, not deviant acts per se, have on the development of deviance. Critics of labeling theory indicate that the theory only applies to a small number of deviants, because such people are actually caught and labeled as deviants.
