To understand this, we need to go through a 1-minute history lesson. In the days long past, the power of the flash has to be calculated manually. The photographer will use a light meter, estimate the distance between the subject and flash. Then do some death-defying mathematics to estimate the required power on the flash.

Photography studio lighting, understanding flash power
While the videos take place in a studio setting, the two core things learned in this course, How flash works, and how to think about using flash, can be applied when using flash in any setting or shooting environment. You simple need to envision how you want the final shot to look, and then use your flashes, and what they've learned in the course, to achieve the desired effect.
